Model genes behind selected ortholog pairs

Illustrative selection • explicit source edges only • not independent gene families

Model gene 1	Model gene 2	OMA relation	GenAge labels
S6 kinase: annotation agreement			
C. elegans rsks-1	D. melanogaster S6k	1:1	Anti / Anti
D. melanogaster S6k	M. musculus Rps6kb1	1:1	Anti / Anti
SOD: annotation discordance			
C. elegans sod-1	D. melanogaster Sod	1:1	Discordant
C. elegans sod-1	S. cerevisiae SOD1	n:1	Discordant
D. melanogaster Sod	S. cerevisiae SOD1	1:1	Pro / Pro
Sparse-organism contributions			
C. briggsae Cbr-daf-2	C. elegans daf-2	1:1	Anti / Anti
C. briggsae Cbr-daf-2	D. melanogaster InR	1:1	Anti / Anti
C. briggsae Cbr-daf-2	M. musculus Igf1r	1:m	Anti / Anti
C. briggsae Cbr-daf-2	M. musculus Insr	1:m	Anti / Anti
D. rerio tert	M. musculus Tert	1:1	Pro / Pro

S6-kinase experiments differ: worm inhibition, fly dominant-negative expression, mouse deletion.

Mouse benefit is female-specific; linked erratum remains unchecked. SOD labels are catalogue-level only.

No worm–mouse S6-kinase edge was recovered; the two displayed edges do not imply a third.

All nine organisms and missing-source states are shown in Figure 1. Relation n:1 retains source multiplicity.
